EDUCATION

McMaster University

Bachelor of Engineering
Software Engineering and Management

Hamilton, ON
Graduated 2024
GPA: 3.5/4.0

EXPERIENCE

Manulife

Platform Solution Architect

Toronto, ON
Jan 2026 - Present

- Designed observability architecture for RAG-based chatbot platform, owning telemetry via Application Insights and Log Analytics, and an LLM evaluation harness using Databricks and ADF to measure response reliability
- Architected three-tier self-serve infrastructure platform for cross-segment provisioning via centralized Terraform modules, GitHub Actions, and segment-specific repositories, standardizing deployments
- Stood up production environment for segregated RAG chatbot instance, configuring networking, RBAC, and security; restructured Cosmos DB schema to isolate confidential data, enabling granular access controls

DevOps Engineer

June 2025 – Dec 2025

- Built 20+ Jenkins pipelines using Terraform to provision Azure resources (Key Vault, ADLS, Web Apps, Cosmos) with security-compliant networking through VNets, NSGs, Private Endpoints, and RBAC
- Developed tower standup automation to provision pre-configured Azure resource groups with secure networking and access controls, reducing setup time for new projects by 70%

Full Stack Software Engineer

June 2024 – June 2025

- Onboarded a new policy type to an advisor-facing policy analysis platform in React and C# (.NET), enabling advisors to evaluate financial metrics based on business rules and sell new policy offerings
- Triaged and resolved production incidents using Devo and New Relic, reducing recurring defects to under 1%
- Built a centralized advisor portal using React micro front-ends and Node.js microservices, consolidating key data from multiple applications into a single entry point and providing navigation to each app

Ciena

Software Engineer Intern

Ottawa, ON
May - Aug 2021, May - Aug 2022

- Engineered a real-time notification system for a network management platform using Java, Spring Boot, and Kafka, delivering alerts on network element utilization and status to customers monitoring their infrastructure
- Implemented back-end features for RESTful APIs and microservices, contributing to end-to-end delivery from planning through release

Software Automation Developer Intern

Sept 2020 - Apr 2021

- Automated API test suites for graph features on the network management platform using JavaScript and Postman, building a graph library for graph representation and calculations, integrated with TeamCity CI/CD pipelines
- Created a Node.js dependency visualization tool that mapped microservice relationships across the network management platform, enabling teams to identify affected services when building and testing solutions

PROJECTS

GazeTracker (Capstone Project)

- Built a browser-based gaze estimation system with JavaScript and jsPsych, collaborating with a university research lab to support real-time on-device tracking without external hardware
- Built a modular on-device inference pipeline combining face detection, landmark extraction, a PyTorch-trained gaze model, and a regression calibrator, exported to ONNX Runtime for fast client-side inference
- Balanced performance and accuracy across models, optimizing architectures and preprocessing to reach 30 FPS and under 3° angular error on consumer hardware

SKILLS

Languages

Python, JavaScript, TypeScript, C#, Java, SQL, Bash

Frameworks

React, Angular, Node.js, Express, .NET, Spring Boot, PyTorch, Flask

Cloud & DevOps

Azure, AWS, Terraform, Docker, Jenkins, GitHub Actions, CI/CD

Web & Backend

REST APIs, WebSockets, GraphQL, HTML, CSS, Kafka, Redis, MongoDB, Microservices

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900), Azure Administrator Associate (AZ-104)

Nov 2025
