EXPERIENCE

Manulife

Platform Solution Architect

Toronto, ON
Jan 2026 - Present

- Designed observability architecture for RAG-based chatbot platform, owning telemetry via Application Insights and Log Analytics, and an LLM evaluation harness using Databricks and ADF to measure response reliability
- Architected three-tier self-serve infrastructure platform for cross-segment provisioning via centralized Terraform modules, GitHub Actions, and segment-specific repositories, standardizing deployments
- Stood up production environment for segregated RAG chatbot instance, configuring networking, RBAC, and security; restructured Cosmos DB schema to isolate confidential data, enabling granular access controls

DevOps Engineer

June 2025 – Dec 2025

- Built 20+ Jenkins pipelines using Terraform to provision Azure resources (Key Vault, ADLS, Web Apps, Cosmos) with security-compliant networking through VNets, NSGs, Private Endpoints, and RBAC
- Developed tower standup automation to provision pre-configured Azure resource groups with secure networking and access controls, reducing setup time for new projects by 70%

Full Stack Software Engineer

June 2024 – June 2025

- Onboarded a new policy type to an advisor-facing policy analysis platform in React and C# (.NET), enabling advisors to evaluate financial metrics based on business rules and sell new policy offerings
- Triaged and resolved production incidents using Devo and New Relic, reducing recurring defects to under 1%
- Built a centralized advisor portal using React micro front-ends and Node.js microservices, consolidating key data from multiple applications into a single entry point and providing navigation to each app

Ciena

Software Engineer Intern

Ottawa, ON
May - Aug 2021, May - Aug 2022

- Engineered a real-time notification system for a network management platform using Java, Spring Boot, and Kafka, delivering alerts on network element utilization and status to customers monitoring their infrastructure
- Built network configuration and device management endpoints in Java/Spring Boot, owning features end-to-end through design, code review, test coverage, deployment, and on-call rotations

Software Automation Developer Intern

Sept 2020 - Apr 2021

- Automated API test suites for graph features on the network management platform using JavaScript and Postman, building a graph library for graph representation and calculations, integrated with TeamCity CI/CD pipelines
- Created a Node.js dependency visualization tool that mapped microservice relationships across the network management platform, enabling teams to identify affected services when building and testing solutions

EDUCATION

McMaster University

Bachelor of Engineering, Software Engineering and Management

Hamilton, ON
Graduated 2024

PROJECTS

Travita – AI powered group trip planning iOS app, App Store

- Designed a 3-service backend on AWS ECS Fargate behind an ALB with path-based routing (REST CRUD, OpenAI-backed LLM inference, AI context synthesis), with MongoDB and S3 for AI-generated artifacts, autoscaled per service via memory/RPS on the I/O-bound AI tier
- Architected a fully async AI pipeline: clients enqueue jobs to SQS, ECS workers assemble context, call OpenAI, and push results via APNs – decoupling the iOS client from model latency, with exponential backoff for rate limits

GazeTracker (Capstone Project) – Browser-based gaze estimation for university research lab

- Built a modular on-device inference pipeline combining face detection, landmark extraction, a PyTorch-trained gaze model, and a regression calibrator, exported to ONNX Runtime for fast client-side inference
- Balanced performance and accuracy across models, optimizing architectures and preprocessing to reach 30 FPS and under 3° angular error on consumer hardware

SKILLS

Languages

Python, JavaScript, TypeScript, Swift, Go, C#, Java, SQL, Bash

Frameworks

React, Next.js, Angular, Node.js, Express, SwiftUI, FastAPI, .NET, Spring Boot, PyTorch

Cloud & Backend

AWS, Azure, Terraform, Docker, GitHub Actions, Kafka, MongoDB, Microservices

Certifications

Azure Fundamentals (AZ-900), Azure Administrator Associate (AZ-104)
